No. JS-01/04/2020-RL  

Dated: 16.4.2020

To,

The ACS/PSRD all States/UTs  
The SMDs/CEOs of SRLM all States/UTs

Many state Rural Livelihood Missions have taken the initiative in the context of COVID-19 in offering their services in various fields like Cash disbursement at doorsteps through BC Sakhi, running Community Kitchens, supply of essential commodities like food grains, fruits and vegetables, etc.

Many states, are making masks/ protective fact covers based on the MoHFW guidelines dated 30.3.2020 and reiterated by MoRD OM dated 4.4.2020. Some states are also now making protective clothing, etc. MoHFW in its guidelines dated 24.3.2020 on rational use of Personal Protective Equipment, provides guidance on the type of Personal Protective Equipment to be used in different settings. Further an advisory has also been issued on 5th March 2020 by Hindustan latex Limited, a Government of India enterprise providing technical specifications of medical supplies including PPEs. The states may see the advisories attached and ensure their compliance.

Yours sincerely,

(Alka Upadhaya)  
Additional Secretary (RD)
Ministry of Health and Family Welfare
Directorate General of Health Services
[Emergency Medical Relief]

1. About this guideline

This guideline is for health care workers and others working in points of entries (POEs), quarantine centers, hospital, laboratory and primary health care / community settings. The guideline uses setting approach to guide on the type of personal protective equipment to be used in different settings.

2. Introduction

Coronaviruses are a large family of viruses, some causing illness in people and others that circulate among animals, including camels, cats and bats. Rarely, animal coronaviruses can evolve and infect people and then spread between people such as has been seen with MERS and SARS.

The outbreak of Novel coronavirus disease (now named COVID-19) was initially noticed from a seafood market in Wuhan city in Hubei Province of China in mid-December, 2019, has spread to more than 185 countries/territories worldwide including India.

The causative agent for COVID-19, earlier termed provisionally as novel Coronavirus has been officially named as SARS-CoV-2.

3. Mode of transmission

There is clear evidence of human-to-human transmission of SARS-CoV-2. It is thought to be transmitted mainly through respiratory droplets that get generated when people cough, sneeze, or exhale. SARS-CoV-2 also gets transmitted by touching, by direct touch and through contaminated surfaces or objects and then touching their own mouth, nose, or possibly their eyes. Healthcare associated infection by SARS-CoV-2 virus has been documented among healthcare workers in many countries.

The people most at risk of COVID-19 infection are those who are in close contact with a suspect/confirmed COVID-19 patient or who care for such patients.

4. Personal Protective Equipment (PPE)

Personal Protective Equipments (PPEs) are protective gears designed to safeguard the health of workers by minimizing the exposure to a biological agent.

4.1 Components of PPE

Components of PPE are goggles, face-shield, mask, gloves, coverall/gowns (with or without aprons), head cover and shoe cover. Each component and rationale for its use is given in the following paragraphs:
4.1.1 Face shield and goggles

Contamination of mucous membranes of the eyes, nose and mouth is likely in a scenario of droplets generated by cough, sneeze of an infected person or during aerosol generating procedures carried out in a clinical setting. Inadvertently touching the eyes/nose/mouth with a contaminated hand is another likely scenario. Hence protection of the mucous membranes of the eyes/nose/mouth by using face shields/ goggles is an integral part of standard and contact precautions. The flexible frame of goggles should provide good seal with the skin of the face, covering the eyes and the surrounding areas and even accommodating for prescription glasses.

4.1.2 Masks

Respiratory viruses that includes Coronaviruses target mainly the upper and lower respiratory tracts. Hence protecting the airway from the particulate matter generated by droplets / aerosols prevents human infection. Contamination of mucous membranes of the mouth and nose by infective droplets or through a contaminated hand also allows the virus to enter the host. Hence the droplet precautions/airborne precautions using masks are crucial while dealing with a suspect or confirmed case of COVID-19/performing aerosol generating procedures.

Masks are of different types. The type of mask to be used is related to particular risk profile of the category of personnel and his/her work. There are two types of masks which are recommended for various categories of personnel working in hospital or community settings, depending upon the work environment:

1. Triple layer medical mask
2. N-95 Respirator mask

4.1.2.1 Triple layer medical mask

A triple layer medical mask is a disposable mask, fluid-resistant, provide protection to the wearer from droplets of infectious material emitted during coughing/sneezing/talking.

4.1.2.2. N-95 Respirator mask

An N-95 respirator mask is a respiratory protective device with high filtration efficiency to airborne particles. To provide the requisite air seal to the wearer, such masks are designed to achieve a very close facial fit.

Such mask should have high fluid resistance, good breathability (preferably with an expiratory valve), clearly identifiable internal and external faces, duckbill/cup-shaped structured design that does not collapse against the mouth.

If correctly worn, the filtration capacity of these masks exceeds those of triple layer medical masks. Since these provide a much tighter air seal than triple layer medical masks, they are designed to protect the wearer from inhaling airborne particles.

4.1.3 Gloves

When a person touches an object/surface contaminated by COVID-19 infected person, and then touches his own eyes, nose, or mouth, he may get exposed to the virus. Although this is not thought
to be a predominant mode of transmission, care should be exercised while handling objects/surface potentially contaminated by suspect/confirmed cases of COVID-19.

Nitrile gloves are preferred over latex gloves because they resist chemicals, including certain disinfectants such as chlorine. There is a high rate of allergies to latex and contact allergic dermatitis among health workers. However, if nitrile gloves are not available, latex gloves can be used. Non-powdered gloves are preferred to powdered gloves.

4.1.4 Coverall/Gowns

Coverall/gowns are designed to protect torso of healthcare providers from exposure to virus. Although coveralls typically provide 360-degree protection because they are designed to cover the whole body, including back and lower legs and sometimes head and feet as well, the design of medical/isolation gowns do not provide continuous whole-body protection (e.g., possible openings in the back, coverage to the mid-calf only).

By using appropriate protective clothing, it is possible to create a barrier to eliminate or reduce contact and droplet exposure, both known to transmit COVID-19, thus protecting healthcare workers working in close proximity (within 1 meter) of suspect/confirmed COVID-19 cases or their secretions.

Coveralls and gowns are deemed equally acceptable as there is a lack of comparative evidence to show whether one is more effective than the other in reducing transmission to health workers. Gowns are considerably easier to put on and for removal. An apron can also be worn over the gown for the entire time the health worker is in the treatment area. Coveralls/gowns have stringent standards that extend from preventing exposure to biologically contaminated solid particles to protecting from chemical hazards.

4.1.5 Shoe covers

Shoe covers should be made up of impermeable fabric to be used over shoes to facilitate personal protection and decontamination.

4.1.6 Head covers

Coveralls usually cover the head. Those using gowns, should use a head cover that covers the head and neck while providing clinical care for patients. Hair and hair extensions should fit inside the head cover.

The specifications for all the PPEs are at Annexure-A.
5. Rational use of PPE

The PPEs are to be used based on the risk profile of the health care worker. The document describes the PPEs to be used in different settings.

</tr>
</tbody>
</table>

**Points to remember while using PPE**

1. PPEs are not alternative to basic preventive public health measures such as hand hygiene, respiratory etiquettes which must be followed at all times.
2. Always (if possible) maintain a distance of at least 1 meter from contacts/suspect/confirmed COVID-19 cases.
3. Always follow the laid down protocol for disposing off PPEs as detailed in infection prevention and control guideline available on website of MoHFW.
Annexure A

Personal Protection Equipment (PPE) - Specifications

(for Contact & Airborne precautions)

1. PPE Kit

1.1 Gloves

- Nitrile
- Non-sterile
- Powder free
- Outer gloves preferably reach mid-forearm (minimum 280 mm total length)
- Different sizes (6.5 & 7)
- Quality compliant with the below standards, or equivalent:
  a. EU standard directive 93/42/EEC Class I, EN 455
  b. EU standard directive 89/686/EEC Category III, EN 374
  c. ANSI/SEA 105-2011
  d. ASTM D6319-10

1.2 Coverall (medium and large)*

- Impermeable to blood and body fluids
- Single use
- Avoid culturally unacceptable colors e.g. black
- Light colors are preferable to better detect possible contamination
- Thumb/finger loops to anchor sleeves in place
- Quality compliant with following standard
  a. Meets or exceeds ISO 16603 class 3 exposure pressure, or equivalent

1.3 Goggles

- With transparent glasses, zero power, well fitting, covered from all sides with elastic band/or adjustable holder.
- Good seal with the skin of the face
- Flexible frame to easily fit all face contours without too much pressure
- Covers the eyes and the surrounding areas and accommodates for prescription glasses
- Fog and scratch resistant
- Adjustable band to secure firmly so as not to become loose during clinical activity
- Indirect venting to reduce fogging
- May be re-usable (provided appropriate arrangements for decontamination are in place) or disposable
- Quality compliant with the below standards, or equivalent:
  a. EU standard directive 86/686/EEC, EN 166/2002
  b. ANSI/SEA Z87.1-2010
1.4. **N-95 Masks**
   - Shape that will not collapse easily
   - High filtration efficiency
   - Good breathability, with expiratory valve
   - Quality compliant with standards for medical N95 respirator:
     a. NIOSH N95, EN 149 FFP2, or equivalent
   - Fluid resistance: minimum 80 mmHg pressure based on ASTM F1862, ISO 22609, or equivalent
   - Quality compliant with standards for particulate respirator that can be worn with full-face shield

1.5. **Shoe Covers**
   - Made up of the same fabric as of coverall
   - Should cover the entire shoe and reach above ankles

1.6. **Face Shield**
   - Made of clear plastic and provides good visibility to both the wearer and the patient
   - Adjustable band to attach firmly around the head and fit snugly against the forehead
   - Fog resistant (preferable)
   - Completely covers the sides and length of the face
   - May be re-usable (made of material which can be cleaned and disinfected) or disposable
   - Quality compliant with the below standards, or equivalent:
     a. EU standard directive 86/686/EEC, EN 166/2002
     b. ANSI/SEA Z87.1-2010

3. **Triple Layer Medical Mask**
   - Three layered medical mask of non-woven material with nose piece, having filter efficiency of 99% for 3 micron particle size.
     a. ISI specifications or equivalent

4. **Gloves**
   - Nitrile
   - Non-sterile
   - Powder free
   - Outer gloves preferably reach mid-forearm (minimum 280mm total length)
   - Different sizes (6.5 & 7)
   - Quality compliant with the below standards, or equivalent:
     1. EU standard directive 93/42/EEC Class I, EN 455
     2. EU standard directive 89/686/EEC Category III, EN 374
     3. ANSI/SEA 105-2011
     4. ASTM D6319-10
5. **Body Bags - Specifications**

1) Impermeable 
2) Leak proof 
3) Air sealed 
4) Double sealed 
5) Disposable 
6) Opaque 
7) White 
8) U shape with Zip 
9) 4/6 grips 
10) Size: 2.2 x 1.2 Mts 
11) Standards:
   a) ISO 16602:2007 
   b) ISO 16603:2004 
   c) ISO16604:2004 
   d) ISO/DIS 22611:2003

All items to be supplied need to be accompanied with certificate of analysis from national/ international organizations/labs indicating conformity to standards

All items: Expiry 5 years

* Due to scarcity of coveralls, and risk versus benefit, that as an emergency temporary measure in larger public interest, in present given circumstances, the fabric that cleared/passed ‘Synthetic Blood Penetration Resistance Test’ (ISO 16603) and the garment that passed ‘Resistance to penetration by biologically contaminated solid particles (ISO 22612:2005) may be considered as the benchmark specification to manufacture Coveralls.” The Coveralls should be taped at the seams to prevent fluid/droplets/aerosol entry.

The test for these two standards (ISO 16603 and ISO 22612:2005), which can be performed in Indian laboratories are as per WHO Disease Commodity Package (Version 4.0)
Emergency Procurement COVID-19
Technical Specification of Medical Supplies

1. **Personal Protective Coverall (Garments) - along with shoe cover - option 1**
   - Impermeable to blood and body fluids
   - Single use
   - Avoid culturally unacceptable colors e.g. black.
   - Light colors are preferable to better detect possible contamination
   - Thumb/finger loops to anchor sleeves in place
   - Quality compliant with following standard
     - a. Meets or exceeds ISO 16603 class 3 exposure pressure, or equivalent
     - b. EN 14126 (barrier to infective agents) certified.

Note: Bidders shall quote for the Complete coverall (for head to ankle) with separate boot legging.

2. **Personal Protective Coverall (Garments) with Tape over seam along with shoe cover - option 2**
   - Single use
   - Avoid culturally unacceptable colours e.g. black
   - Light colours are preferable to better detect possible contamination
   - The Fabric, Garment/Coverall and Seam should pass Synthetic Blood Penetration test at SITRA, Coimbatore. Manufactures/suppliers submitting the pass certificate as above would be qualify.
   - Coverall shall be designed to be universal Fit
   - Coverall shall have in built Hood Cap
   - Zipper of the coverall shall be covered with a flap to avoid accumulation of microbes
   - Soft Elastic to be fitted around Front of hood, wrists & ankles

   - Boot Cover:
     - o Pair of Boot Covers made of same fabric as of Coverall
     - o Soft elastic to be fitted at two levels, ankle and end
3. **Goggles**

- With transparent glasses, Zero power, well fitting, covered from all sides with elastic band/or adjustable holder.
- Good seal with the skin of the face.
- Flexible frame to easily fit all face contours without too much pressure.
- Covers the eyes and surrounding areas and accommodates for prescription glasses.
- Fog and scratch resistant.
- Adjustable band to secure firmly so as not to become loose during clinical activity.
- Indirect venting to reduce fogging.
- May be re-usable (provided appropriate arrangements for decontamination are in place) or disposable.
- Quality compliant with the below standards, or equivalent:
  a. EU standard directive 86/686/EEC, EN 166/2002
  b. ANSI/SEA Z87.1-2010

4. **N-95 Masks**

- Shape that will not collapse easily
- High filtration efficiency
- Good breathability, with expiratory valve
- Quality compliant with standards for surgical N95 respirator:
  a. NIOSH N95, EN 149 FFP2, or equivalent
- Fluid resistance: minimum 80 mmhg pressure based on ASTM F1862, ISO 22609, or equivalent.
- Quality Compliant with standards for particulate respirator that can be worn with full-face shield

5. **Nitrile Gloves (Size 6.5, 7 & 7.5)**

- Nitrile
- Non-sterile
- Powder free
- Outer gloves preferably reach mid-forearm (minimum 280mm total length)
- Different sizes (6.5, 7 & 7.5)
- Quality compliant with the below standards, or equivalent:
  a. EU standard directive 93/42/EEC Class I, EN 455
  b. EU standard directive 89/686/EEC category III, EN 374
  c. ANSI/SEA 105-2011
  d. ASTM D6319-10
6. **Face Shield**

- Made of clear plastic and provides good visibility to both the wearer and the patient
- Adjustable band to attach firmly around the head and fit snugly against the forehead
- Fog resistant (preferable)
- Completely covers the sides and length of the face
- May be re-usable (made of material which can be cleaned and disinfected) or disposable
- Quality compliant with the below standards, or equivalent:
  a. EU standard directive 86/686/EEC, EN 166/2002
  b. ANSI/SEA Z87.1-2010

7. **Triple Layer Surgical mask with elastic band**

Three layered surgical mask of non-woven material with nose piece, having filter efficiency of 99% for 3 micron particle size.

A. ISO 13485 / ISO 9001 / EN14683 or equivalent

8. **Viral Transport Medicum with Swab (Nasal or Throat swab)**

9 & 10 - **Hand Sanitizer (500ml &100ml)**

- **Option 1:**
  2 Propanol BP 45 %
  1 Propanol BP 30 % Macetronium ethyl sulphate 0.2%

- **Option 2:**
  Isopropyl alcohol IP....72%w/w
  Quinolone yellow
  Triclosan .30% w/w
  Excitients-q.s

- **Option 3:**
  Chlorhexidine Gluconate soln IP 2.5% v/v
  Ethyl Alcohol IP 70% v/v

- **Option 4:**
  Ethanol - 72.34% v/v
  Propylene Glycol - 1%
Glycine - 1%
Aloe Vera Extract - 0.1%
DM water - 25.56%

11. Sterile Gloves:
   - Latex - IS 13422 with ISI mark

12. Non Sterile (Disposable)
   - Latex - IS 4148 with ISI mark

19. Digital Infrared Thermometer (any make)
   - Measures the body temperature by determining the infrared reflected from the front radiation (no contact).
   - Measuring range of the infrared temperature (body) from 32 to 42.5
   - Resolution 0.1
   - High accuracy +/-0.2
   - Obtaining quick results: Time response 1 second
   - Indication of measured value in °C or °F
   - Limit value for the adjustable alarm as programmable
   - Distance of measuring: at least 15 cm
   - Memory to store (expandable memory desirable)
   - Easy to use, robust
   - Automatic switch off
   - Display backlight glow
   - Waterproof lens easy to clean and disinfect
   - Batteries: Which are replaceable/chargeable
   - High degree of health and safety
   - Warranty: At least 3 years
   - Accessories:
     I. Carrying case
     II. Data transfer software
     III. User manual

20. Digital Thermal Scanner - Full Body (with sensing to 3m and beyond)
   - Compact and light weight design
   - Tripod mountable
   - Able to measure temperature from a distance of at least 3-5 mtrs
   - Process single and multiple hotspots tracing and alarm
   - Able to capture both thermal and digital camera image
